Large repositories of 3D data are rapidly becoming available in several fields, including mechan graphics. As the number of 3D models grows, there is an increasing need for computer algorithm and discover relationships between them. Unfortunately, traditional text-based search technique especially when queries are geometric in nature (e.g., find me objects that fit into thi ...

Understanding distributed applications is a tedious and difficult task. Visualizations based on pr obtain a better understanding of the execution of the application. The visualization tool we use University of Waterloo. However, these diagrams are often very complex and do not provide the application. In our experience, such tools display repeated occurrences of non-trivial commun ..
